Keymacro is a free standalone utility that helps you quickly convert your Windows application keyboard shortcut into a program or batch file with just a few simple steps! After installation, it creates a template keymap (.kmi) file, where you can save custom keymaps (keymaps are a set of keys that has been assigned a command). Just choose a shortcut on your computer (like Ctrl+Alt+Del), choose the command you want to add and click the 'Convert' button. Your new shortcut will be created, and you can save it to the template keymap and the Keymacro directory. There is no limit to the number of keymaps that you can save, and Keymacro supports the following functions: ① If your shortcut doesn't work, you can add the keymap so it will start the application, switch to the application, and execute the keymap. ② If your shortcut works, but you don't want to use it, you can add the keymap so it will hide the application. ③ If you don't use the shortcut, you can add the keymap so it will open the application's "File" menu. ④ You can use the shortcut to open the application's menu. ⑤ You can use the shortcut to change the application's setting. ⑥ You can use the shortcut to close the application. ⑦ You can use the shortcut to open a file in the application. ⑧ You can use the shortcut to open a file in the application's file manager. ⑨ You can use the shortcut to close the application. ⑩ You can use the shortcut to open the application's help menu. ? Q: How to access function inside of a function I want to access a function that belongs to a class inside of a class method. This is what I have:

```
class Calc(object):
    def add(self):
        x = self.input_value('add')
        y = self.input_value('add')
        z = x + y
        print(z)
class Interact(object):
    def add(self):
        calc = Calc()
        x = float(self.input_value('add'))
        y = float(self.input_value('add'))
        calc.add()
        z = x + y
```
