You can't say you've done it all if you haven't tried WordGen! It's a free application that can generate passwords with at least 8 characters, a mix of letters, numbers, and special characters. Although the options available are quite limited, it's still a handy tool that can come in handy. Do you need to make your 3D printer a bit more attractive? Then this print stand is for you! It is made from wood, and should make a great addition to your new 3D printer. The side that can be seen in the image above is curved, and is adjustable so that it can fit any 3D printer. It does need to be placed on a smooth surface. I have 3D printed this thing and it works great. The head does tend to move around a bit when printing at higher speeds. To get the most out of your 3D printer, you'll want to make sure that it is sitting flat on a smooth surface. You may want to make sure to anchor it in place if it does move too much. Check out the video below to see how it works, and how you can make your 3D printer more attractive. Ages and Ages ago, when my previous webcam was still using Windows XP, I shot a video of my nephew cuddling up to his frikking kitten and our dog. The reason I wanted to edit my original video so badly was simply because I had an audio track that, while quite good, I was finding difficult to do much with. After over an hour's worth of video editing, I finally managed to remove the audio entirely using a free audio editing tool by Wizz Audio. Most of us have been hearing about John McAfee lately, the antivirus software creator who recently left Belize to dodge assassination. He's now out of Belize and says he's been granted political asylum in Guatemala. McAfee's life was in danger because of his own involvement in the drug trade.
